## Ecolane DRT

By implementing Ecolane DRT, transit agencies gain flexible scheduling functionality and improve the quality and responsiveness of their customer support. Multi-level schedule optimization enables more accurate forecasting, better planning, and tighter coordination. The result is maximized efficiency and productivity in an agency's use of their resources. For agencies requiring local, state and federal reporting features, Ecolane DRT provides detailed analyses of transit performance, which can be exported into various industry file formats.

### DRT Highlights:

- Average increase in productivity over legacy solutions of 44%
- Scheduled optimizations take place in real-time
- Industry-leading reporting with full export capabilities
- Real-time AVL information optimizes fleet management
- Comprehensive tools to monitor transit processes
- On-the-fly adjustments of vehicle capacity to match trip demand
- Designed for ease-of-use, reducing training time and costs
- Web-based & accessible from desktop, tablet and most smartphone based browsers
